

Citrix conducted a survey of over 1000 IT professionals across Europe, the Middle East and Africa to understand their priorities and challenges around enterprise mobility. The results below show that the appropriate security precautions are not always taken.

Q1/5: Our journey starts with mobilizing email, calendar, contacts...

Did you use a smartphone or tablet to check your work email while on vacation this summer?

93%

✓ Yes

7%

✗ No

On your smartphone, how do you access work email?

74%  Standard native app
i.e. Apple Mail or Gmail

20%  3rd party containerized
solution i.e. Citrix XenMobile

6%  It's routed to my personal email

Only 20% were using secure access to emails on mobile devices such as a 3rd party containerised solution like **Citrix WorxMail**.

Q2/5: ...then we want our data...

In the last 6 months, have you used your personal cloud storage i.e. DropBox, OneDrive or iCloud to store, move or send any work documents?

71%  Yes

29%  No

Using personal cloud storage for company data is very risky and breaks data protection laws. **Citrix Sharefile** meets the mobility and collaboration needs of users and the security requirements of the enterprise.

Q3/5: ...which means the company needs mobile security...

Can your company remotely wipe every device you use to access work email – including personal devices?

68%

✓ Yes

32%

✗ No

How often do you check the security of your connection before paying by credit card online?

48%

Sometimes

42%

Always

10%

Never

Citrix XenMobile protects company data on any device and remotely wipes them if lost, stolen or out of compliance.
